

EINLADUNG zum IFP-SEMINAR

Nanomechanical infrared detectors: Towards single-molecule absorption spectroscopy

Silvan Schmid

Institut für Sensor- und Aktuatorsysteme, TU Wien

Host: Silke Bühler-Paschen

Termin: Mittwoch, 21. November 2018, 16:00 Uhr

Ort: Institut für Festkörperphysik, TU Wien

Wiedner Hauptstraße 8-10, 1040 Wien

Seminarraum DC rot 07 (roter Bereich, 7. OG)

Abstract:

Nanomechanical drum resonators made of 50 nm thick silicon nitride respond strongly to changes in temperature. We use this high temperature responsivity to detect the photothermal heating by absorbed infrared light. We reach unprecedented sensitivities in the femto-watt regime at room temperature. These are sensitivities which are otherwise only obtainable with cryogenically cooled detectors. This has allowed us to measure the infrared absorption spectrum of probe material of only few pico-grams [1]. Recently, with an optimised silicon nitride drums we have reached single-molecule sensitivity. This has allowed us to perform non-fluorescent single-molecule absorption microscopy with a signal-to-noise ratio of >70 [2]. This unprecedented sensitivity opens up an array of new and improved possibilities in the field of single-molecule IR spectroscopy.
