

IFF-SEMINAR / SFB-ViCoM Seminar

Design of topological and superconducting properties in and out
of equilibrium

Hideo Aoki

Department of Physics, University of Tokyo and AIST, Tsukuba, Japan

Host: Karsten Held
Termin: **Donnerstag, 11 Mai 2017, 10:00 Uhr**
Ort: Institut für Festkörperphysik, TU Wien
Wiedner Hauptstraße 8-10, 1040 Wien
FH Hörsaal 3 (gelber Bereich, 2. OG)
Förderer: ERC-StG-306447 AbinitioDFA und SFB-ViCoM

I shall explain theoretical ideas for designing topological properties. In equilibrium, topological properties for flat-band systems are discussed. We can even design superconductivity that is sitting right next to a topological phase[1].

In non-equilibrium, topological properties that are induced by circularly-polarised light will be described for the Floquet topological insulator[2] and Floquet spin-chiral[3] systems.
